

SUPPORT SOLUTIONS FOR YOUR MISSION SUCCESS

YOUR LONG-TERM **PARTNER**

We understand the importance of aircraft availability for the success of your mission. For decades Saab has provided effective support solutions worldwide for both rotary and fixed-wing aircraft. Our focus is to ensure efficient support at the right time at the right place. A support solution provided by Saab guarantees that your system creates optimum value throughout its life cycle.

SUPPORT SOLUTIONS

FOR EFFICIENT HELICOPTER OPERATIONS

Our main strength is to secure delivery of cost-effective support solutions for individual customer needs, from single services to complete undertakings for aircraft fleet availability. Saab has developed a flexible and comprehensive product portfolio to meet demanding customers support needs. In order to improve availability and cost efficiency we thoroughly analyse each customer's specific operational needs. Our goal is to provide a support solution where we interact perfectly with the customer's own organisation. No gaps. No overlap.

> **MAIN CUSTOMERS**

FMV / Swedish Armed Forces
Scandinavian Air Ambulance
Swedish Maritime Administration
Sikorsky
NHIndustries
Evergreen

> **STANDARDS AND CERTIFICATES**

Civil aviation:

EASA Part-21 J, G
EASA Part-145
EASA Part-M
EASA Part-147

Military aviation:

RML-V-5J, -5JA, -5G
RML-V-6A, -6D
RML-V-2
RML-V-7

Quality and environment:

ISO 9000 and ISO 14001

> **CAMO AND FLEET MANAGEMENT**

Continuous airworthiness management and fleet management services for customer aircraft fleets.

> **AIRCRAFT MAINTENANCE AND MODIFICATIONS**

Maintenance, inspection and overhaul of aircraft platforms at line and base level, including implementation of service bulletins and major modifications.

> **COMPONENT MRO**

Component maintenance, repair and overhaul, including implementation of service bulletins and modifications, for airborne components and support equipment.

> **LOGISTICS AND SUPPLY**

Monitoring, control and replenishment of storage levels for components, spare parts and consumables. Transportation of materiel between different storage facilities and transfer points, including receipt and inspection, storage and dispatch as well as ensuring that the materiel is packaged, handled and stored in a safe and secure way. And making sure that information for spares is updated and available.

> **LIFE CYCLE OPTIMISATION**

Services for optimisation of platform utilisation and its support resources during its life cycle. Typical services are system analysis and optimisation, improvements of maintenance programmes, engineering services, publications and FRACAS in order to sustain airworthiness and cost-effective operations.

> **TRAINING**

Management, administration and execution of training activities for air and ground crew personnel. This also includes analysis of training needs in order to tailor training to suit the individual operator's requirements.

> **DESIGN AND PRODUCTION**

Delivery of design services for aircraft, airborne equipment and support equipment, based on Saab as the holder of Design Organisation Approvals. Delivery of production services for aircraft, airborne equipment and support equipment, based on Saab as the holder of Production Organisation Approvals.

> **FLIGHT OPERATIONS**

Flight operation including aircrew services and flight line support activities.
