## Saab receives British Army order to support live training in Oman

Saab has signed a GBP 20 million (SEK 270 million) amendment to the Instrumented Live Training (ILT-D) contract signed in April 2024 with the UK Ministry of Defence. The amendment will deliver equipment and training support services for British Army training in Oman. Deliveries will take place 2024-2025.

The order includes Saab's latest training and simulation equipment including a high-fidelity system which realistically and accurately replicates training engagements and ensures the activity is measurable and can be used to review and enhance training outcomes. The solution will operate as part of the MOD's existing Tactical Engagement Simulation (TES) capability.

Saab technicians will also provide training services to ensure availability and performance at all stages. In addition to this, Saab will manage the Exercise Control (ExCon) environment including the captured data to support objective measurement of the training.

"We are pleased to continue our long-standing support to the British Army's training systems in the UK as well as internationally. Interoperability is at the heart of Saab's training and simulation solutions, and this contract will enable seamless cooperation with the Royal Army of Oman and other key international allies and partners," said Andy Fraser, Group Managing Director, Saab UK.

"This significant contract amendment further solidifies the strong partnership between the British Army, the Royal Army of Oman, and Saab. It demonstrates our commitment to providing first-rate training for our forces, aligning with the evolving nature of warfare and the Collective Training Transformation Programme," said Simon Pearce, Training and Simulation Systems Portfolio Leader for Defence Equipment & Support, the contracting authority.

The British Army's system can be deployed globally, offering the flexibility to support training outside of Oman. Saab's live simulation equipment integrates with other systems that use the applicable NATO standards.

*Saab is a leading defence and security company with an enduring mission, to help nations keep their people and society safe. Empowered by its 22,000 talented people, Saab constantly pushes the boundaries of technology to create a safer and more sustainable world. Saab designs, manufactures and maintains advanced systems in aeronautics, weapons, command and control, sensors and underwater systems. Saab is headquartered in Sweden. It has major operations all over the world and is part of the domestic defence capability of several nations.*
