## Boeing T-X Advanced Pilot Training System

### Description and Purpose:

Boeing T-X is an all-new advanced pilot training system designed specifically for the U.S. Air Force training mission. It includes trainer aircraft, ground-based training and support – designed together from the ground up. It will replace the T-38 trainer in use by the Air Force today and will train fighter and bomber pilots for generations to come.

**Customer:** U.S. Air Force

### General Characteristics:

The Boeing T-X aircraft has one engine, twin tails, stadium seating and an advanced cockpit with embedded training. It's the cornerstone of the complete advanced pilot training system, which also includes state-of-the-art ground-based training and a maintenance-friendly design for long-term supportability. The clean-sheet approach allows use of the latest technology, tools and manufacturing techniques – creating a more affordable and flexible option than older, existing aircraft. The system is also designed to evolve as technology, missions and training needs change.

- **Fighter-like design and performance: twin tails, GE F404 engine, and high G and high angle-of-attack capability.** Boeing T-X is designed to look, feel and perform like fighter aircraft. The twin-tail design offers improved stability and is visually similar to current and future fighters, to enhance training. Twin tails provide excellent control, inherent speed break functionality, and safer air refueling.
- **Stadium seating: JPATS 1-7 compatible with outstanding visibility.** Stadium seating allows for ideal instructor positioning and visibility for flight instruction, from teaching basic traffic pattern operations to advanced visual air combat training. And, JPATS 1-7 compliant seating allows a wider range of individuals to train and instruct.
- **Maintenance-friendly design: high wings, easy access panels and easy reach.** The Boeing T-X design focuses on accessibility, fewer and more common fasteners, and readiness of critical items like engine and seats. It is also designed around

common U.S. Air Force ground equipment and uses established suppliers to reduce supply chain complexity.

- **Advanced cockpit: clean, intuitive and reconfigurable.** A modern fighter-like cockpit, flexible avionics and a reconfigurable large area display allow students and instructors a maximum range of training options.
- **Safety designed-in: stable, student- and instructor-friendly platform.** Boeing T-X offers fly-by-wire flight controls, ample thrust, and excellent handling at all speeds, configurations and high angle-of-attack.
- **Real-as-it-gets training.** Boeing T-X is a complete advanced pilot training solution providing real-as-it-gets simulation, interactive classroom lessons, computer-based training modules, adaptive training that adjusts to students' needs, and a complete suite of instructor tools – for optimum results on the ground and in the 'classroom in the sky.'
- **America's Trainer:** Boeing T-X is more than 90% made in America and will support 17,000 jobs in 34 states across the country. Our partner Saab will base its manufacturing in America, as will suppliers including General Electric and Triumph.

The U.S. Air Force schedule indicates initial operating capability (IOC) in 2024.
