TACTICALL NAVY REFERENCES

Internal Communication

TactiCall gives you complete control and fast access to all networks on board your vessel. Be it Functional Nets including telephony, public address, entertainment systems and the like or Fighting Nets handling alarms, broadcasts and orders, weapon teams or mission control.

TactiCall is highly flexible and scalable, it is platform independent and will integrate seamlessly into your combat management system of choice. In other words TactiCall lets you control all internal communication on board your vessel and with features such as record and playback helps you log and later analyze your communication flows.

External Communication

TactiCall is a perfect match for Task- or coalition force operations, including other military arms. SOF teams, air force, marine detachments and even civil and NGO agencies can be important players in the operation. More often than not, this setup includes a multitude of different frequency bands, networks and radio equipment. TactiCall will integrate all these into one simple and easy to use solution that permits everybody to reach each other regardless of equipment and technology used.

TactiCall will allow key features for modern day operations like red/ black separation, multi-level security operations, global public address and allowing government or task force commanders to communicate directly with whoever needs to be addressed in a given situation - facilitating a much smoother and more rapid "Statement of No Objections" chain.
