

# AUTONOMOUS FUNCTIONS AND SYSTEMS POLICY

Developments in autonomous functions and systems are transforming our world. The defence industry is no exception and autonomy will increasingly play a crucial role towards assisting humans to keep people and society safe.

As technology continues to advance, Saab remains committed to a responsible approach to the development of autonomous functions and systems in all parts of our operation, giving our customers the necessary tools to comply with legal and ethical norms.

This will be achieved through:

- recognizing trustworthiness, explainability and transparency as integral parts to autonomy
- working systematically to minimize the risk of unfair bias in autonomous systems and functions
- ensuring the possibility for humans to exercise necessary control and supervision over autonomous functions and systems
- developing, implementing and maintaining a common set of design principles to further the objectives of this policy
- ensuring that sensitive design choices are subject to a multi-disciplinary review
- continuously engaging with our customers and other stakeholders on all aspects of autonomy
- always respecting and complying with applicable laws and international norms.

Micael Johansson  
President and CEO, Saab AB

*Saab serves the global market with world-leading products, services and solutions within military defence and civil security. Saab has operations and employees on all continents around the world. Through innovative, collaborative and pragmatic thinking, Saab develops, adopts and improves new technology to meet customers' changing needs.*
