MISSION SYSTEM

Multi-role capability
- Air Surveillance
- Sea Surveillance
- Intelligence
- Command & Control

Multi-mission capability
- Air and Sea surveillance including Intelligence
- Search and Rescue
- Air policing

ERIEYE SYSTEM CAPABILITIES

ERIEYE is a complete AEW&C system that provides multi-role and multi-mission capabilities for both military and civilian needs.

Multi-role capability
The capabilities of the ERIEYE AEW&C Mission System include:
- Air Surveillance
- Sea Surveillance
- Intelligence
- Command & Control

Multi-mission capability
- Air and Sea surveillance including Intelligence
- Search and Rescue
- Air policing

The extensive COM suite secures communication with participating assets and other control centres, on the ground or in the air.
ERIEYE gives you the capabilities of a national asset while minimizing the footprint and time required for deployment. A true force multiplier that will facilitate the optimization of your operations.

One great advantage of an airborne sensor flying at high altitude compared to a ground-based one is the huge coverage for detection of targets, especially at low altitudes. Even if the ground-based sensor increases its range, it will only affect targets at very high altitudes.
