SAVE YOUR SOLDIERS’ LIVES
MEDICAL SUPPORT SOLUTIONS
Support is indeed a wide field and our mission is to provide cost-efficient and quality-assured operation, maintenance and service for virtually any kind of system. This may be a fleet of vehicles, a jet fighter system – or a field unit for medical care.

**Forward Resuscitation Capacity (FRC)**
Efficiency on the battlefield is a complex matter and taking care of injuries is an important factor. With our FRC solution your soldiers will have access to qualified surgery and medical care immediately behind the lines; triage, resuscitation and damage control surgery. Furthermore the unit is extremely mobile, total weight is just 900 kgs, designed for airdrop, set-up takes just one hour and it is self-sufficient for 24 hours or more.

**What you need is what you get**
To optimise operational capabilities we thoroughly analyse each client’s specific needs. Equipment included can be tailored to customer specification, and the concept as such is NATO-compatible. Our goal is to design a solution where we interact perfectly with the existing organisation. No gaps. No overlap.

---

**First Line Medical Care**
Provides qualified surgery and medical care immediately behind the lines.

**Advanced Capabilities**
Triage, resuscitation and damage control surgery.

**Mobile and Flexible**
Light weight, soft-wall structure; only 900 kgs for the complete unit.

**Quick Deployment**
Compact packaging designed for airdrop. Operational within 1 hour.

**Self-Sufficient**
More than 24 hours reserve of water, heating and supplies.

**NATO-Compatible**
Very high degree of interoperability.
